

Color Legend Highlighting

Color legend highlighting is a powerful analytical mode for the color legend that allows you to focus on select members in the view. When you turn on color legend highlighting, the marks associated with the selected items in the color legend are colored while all other marks are gray.

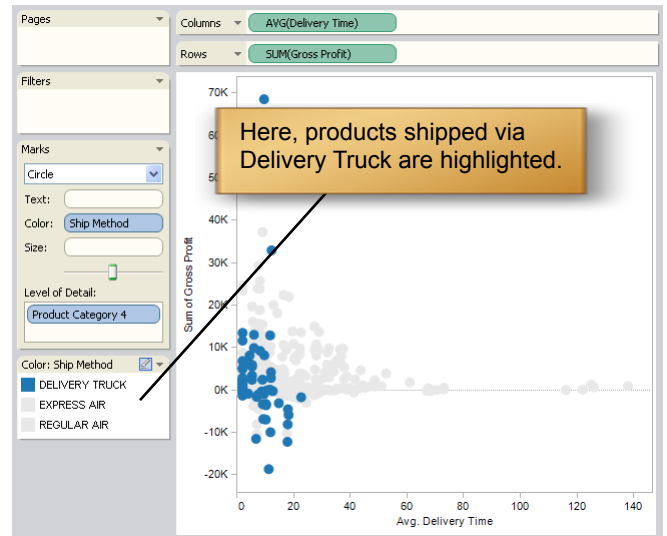

1 Turn on Color Legend Highlighting

Click the Highlight button in the color legend title bar or select **Highlight Selected Items** on the color legend menu.

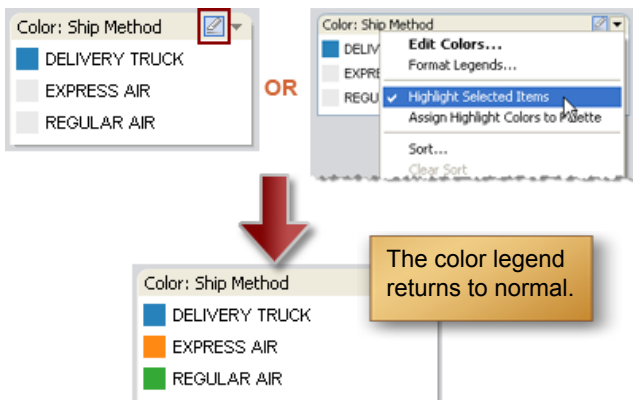

2 Select Members in the Color Legend

The selected members in the color legend are colored while all other members are gray.

3 Turn off Color Legend Highlighting

Click the Highlight button in the color legend title bar or select **Highlight Selected Items** on the color legend menu. The color legend returns to normal.

4 Assign Highlight Colors to Palette

If you like how a view is highlighted you can save the highlighting by assigning the highlight colors to the color palette. With the view highlighted how you like, select **Assign Highlight Color to Palette** on the color legend menu.
